Partner identity and access
management (PIAM)

One of These Things Is Not Like the Other

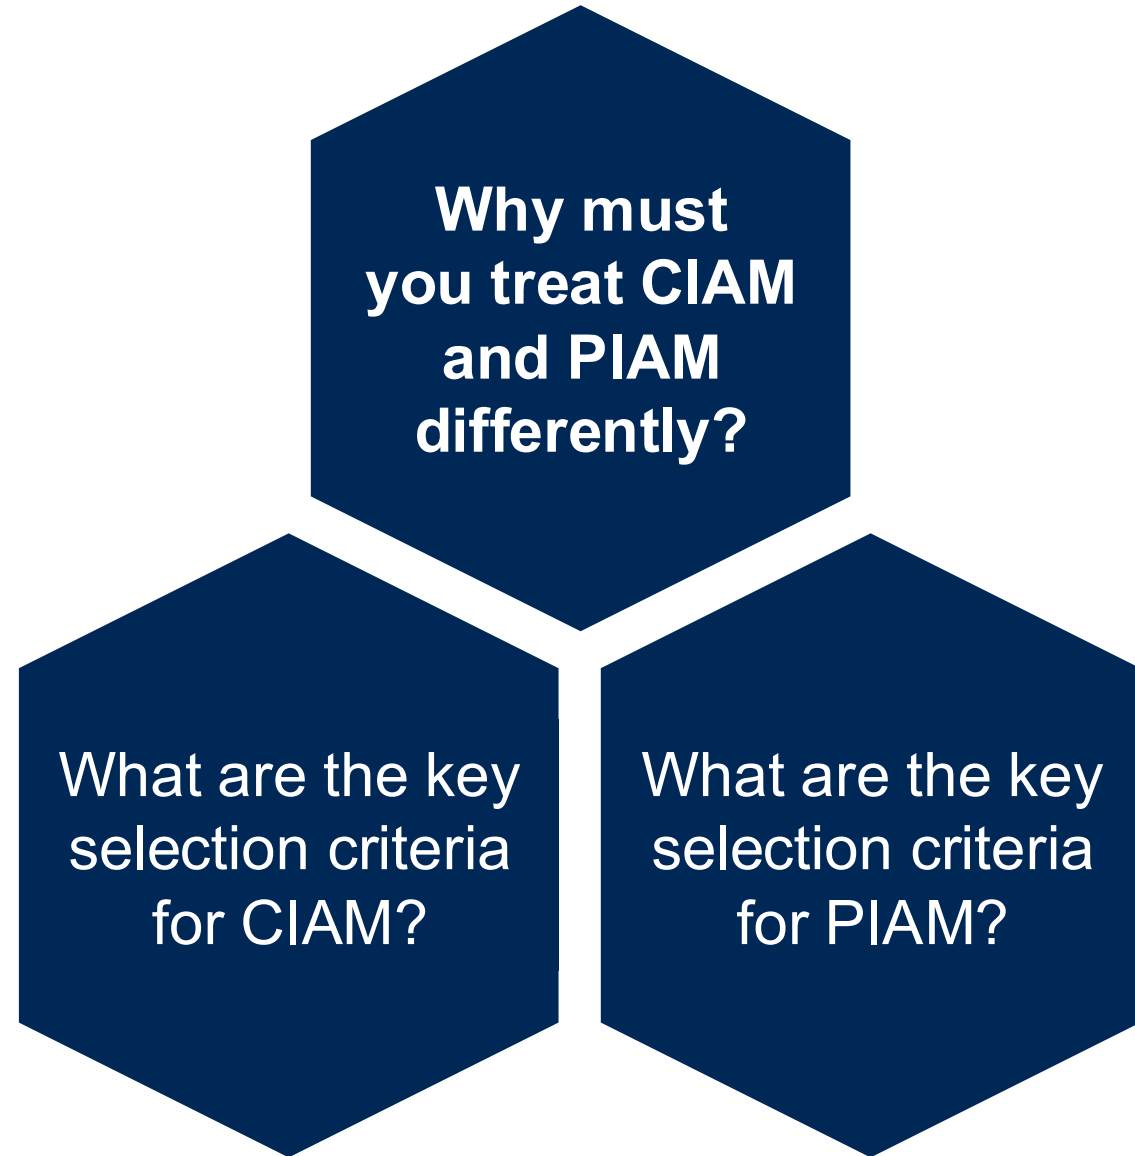

CIAM Is a Well-Known, Multibillion-Dollar Market

Remember that CIAM and PIAM have different user bases and requirements, and the same IAM tool may not work for both.

PIAM Strategy

Partner tiering

	IAM maturity		Trust level	Number of person(s) in the organization
Tier 1 partner	Limited	or	Limited	
Tier 2 partner	Mature	and	High	
Tier 3 partner	No IAM	and		Multiple
Tier 4 partner	No IAM	and		Single

PIAM Strategy — Security Considerations

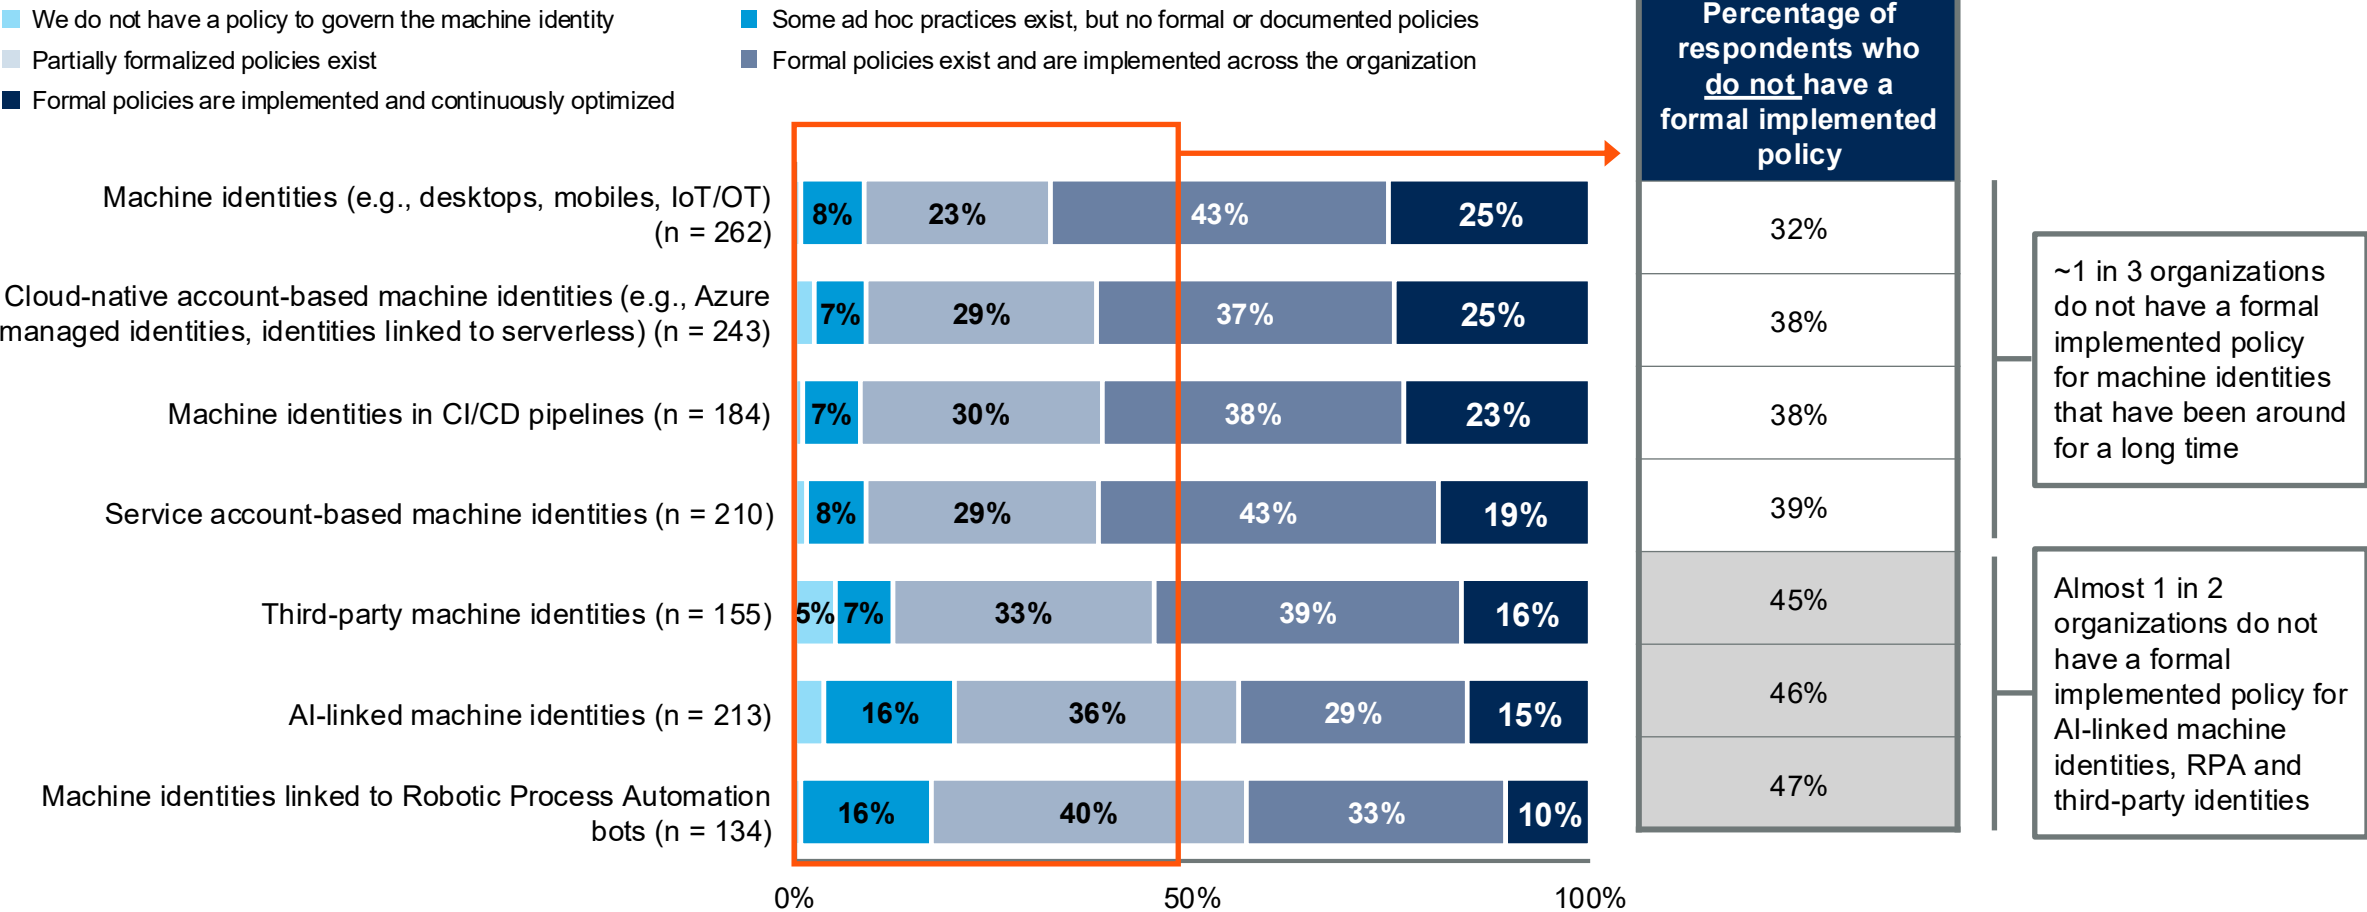

Typical Third-Party Network Illustrative

Organizations depend on a complex ecosystem of third parties to drive business performance.
Perfect monitoring of all third parties is impossible with limited resources.

PIAM Strategy — Machine Identities

A notable proportion of organizations have not yet implemented a formal policy to govern machine identities linked to RPA (47%), AI (46%) and third parties (45%)

Your PIAM strategy and your IAM tools may be significantly different depending on your PIAM use case and user constituency.

Recommendations

- ④ Use the right terminology for these use cases to avoid confusion, leave behind B2B and B2C, and use PIAM and CIAM.
- ④ Understand the drivers and buying requirements for these user constituencies, which will vary widely, and remember that workforce is more closely related to PIAM compared to CIAM.
- ④ The approach to identity data will be very different for CIAM use cases and for PIAM use cases where there is a wide range of IAM maturity.
- ④ PIAM tools are where CIAM tools were several years ago. It is now possible for a PIAM implementation to be served by an out-of-the-box IAM tool.
- ④ Don't forget about third-party risk considerations when planning out your PIAM strategy.
