

Securing Agentic AI Access for the Modern Workforce

Joe Dadzie
Vice President

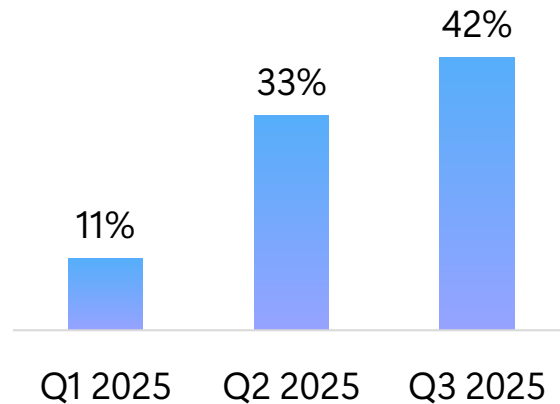

The AI Revolution

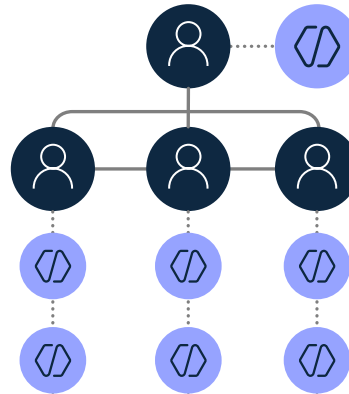

AI agents in the enterprise today

Nearly half of large organizations have deployed agents

Workforce strategy and expectations are transforming

3 of 4 leaders expect employees to manage agents in 2-3 years

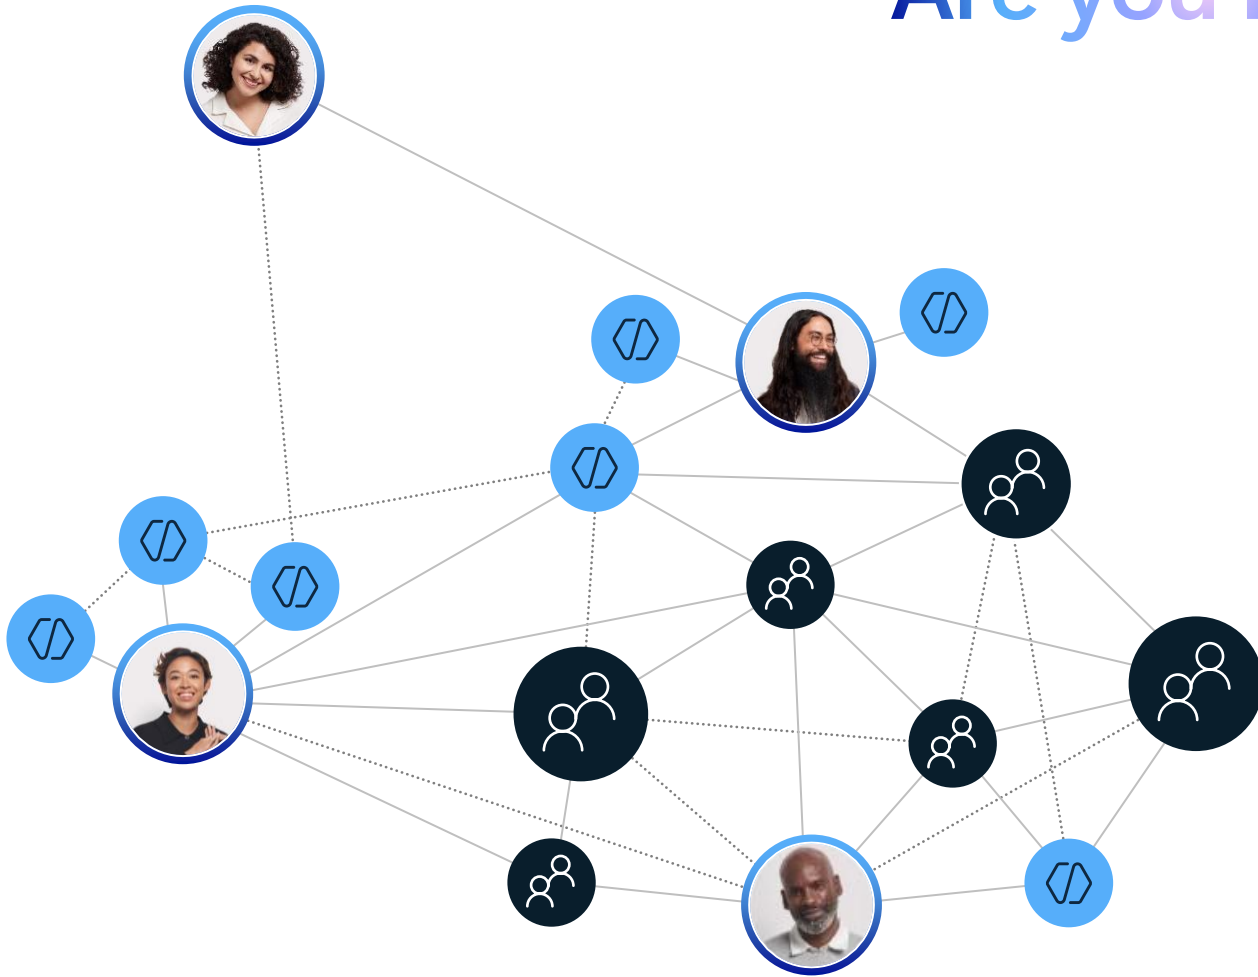

Cybersecurity and governance are top deployment blockers

78%

concerned about cybersecurity

Agents are already here.

Are you ready?

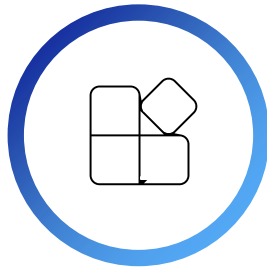

- How can I get visibility to the sprawl of agents in my environment?
- What access permissions and privilege should each agent have?
- Can I trace and audit the actions performed by each agent?
- How do I prevent attacks and protect agents in my organization?

The best way to manage agents
is to **extend infrastructure**
you use to manage users

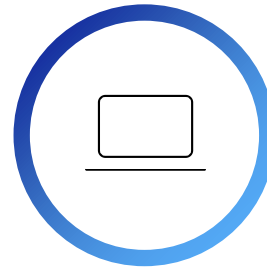

Agents are a new type of identity

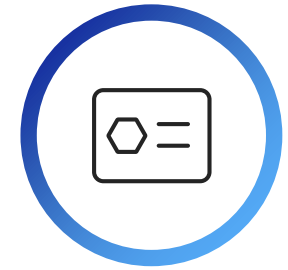

User

App

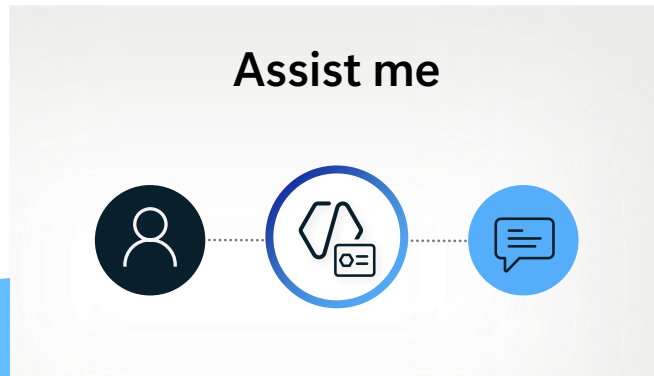

Device

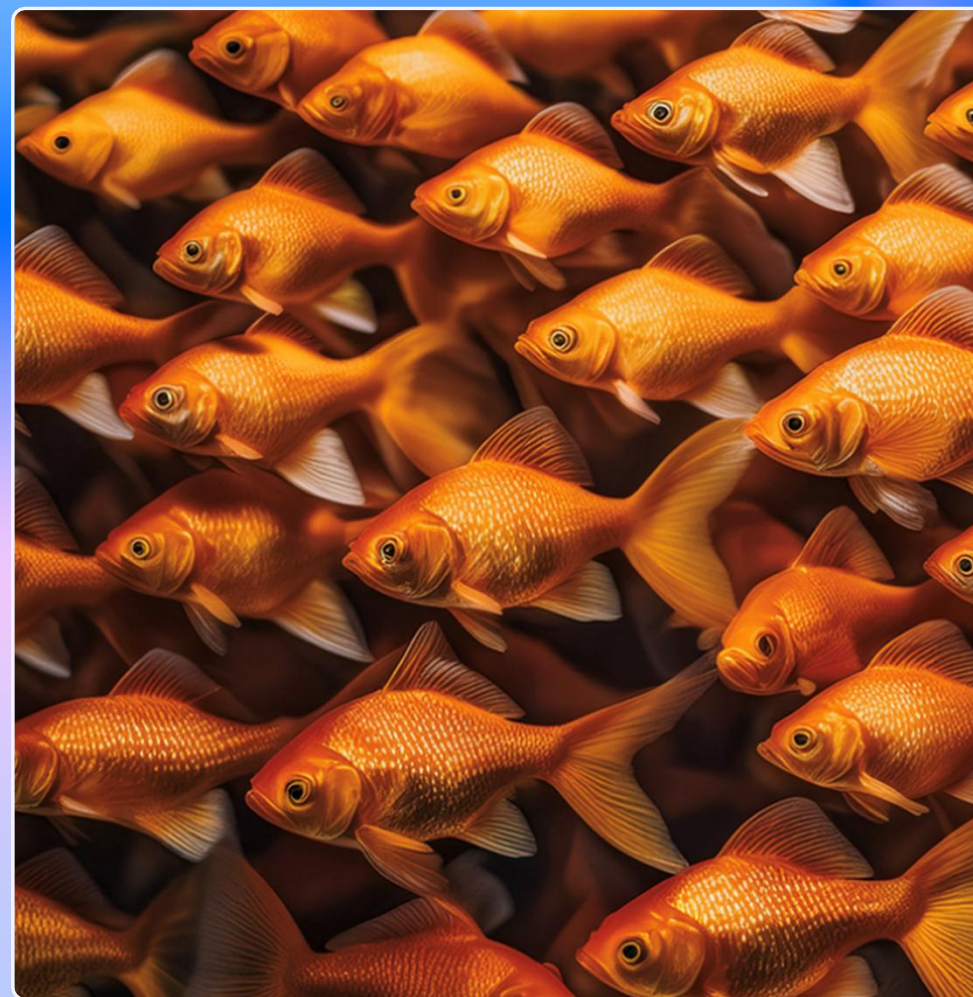

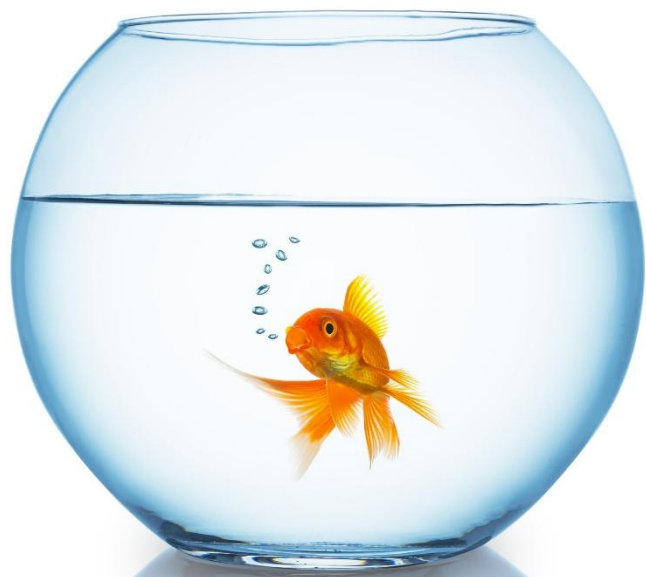

Agent

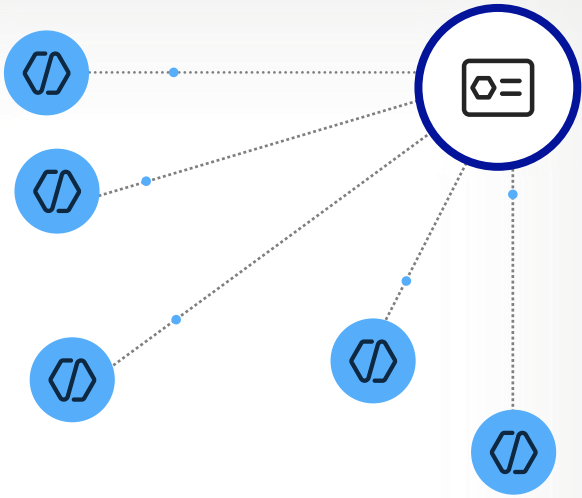

As agent roles change, so should permissions

Agent permissions

Framework for securing agentic AI access:

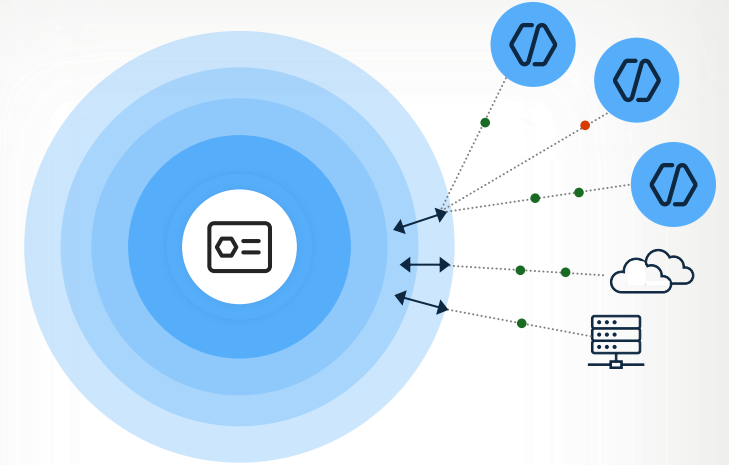

Manage

AI agents at scale

Govern

agent identities and lifecycle

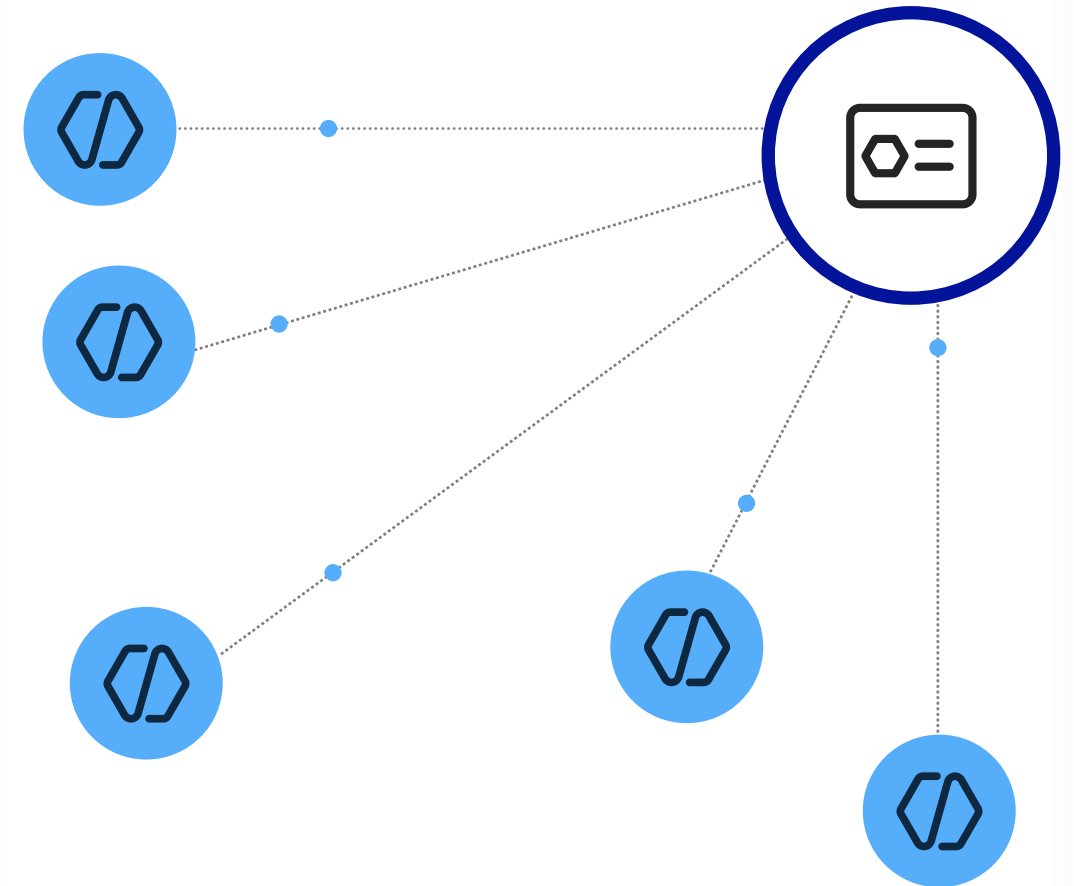

Protect

agent access to resources

Manage AI agents at scale

Ensure every agent is created with a unique identity so you can authenticate, and manage agents at scale

- Gain visibility into agents in your environment.
- Ensure that new agents have an agent ID built-in.
- Empower developers build enterprise-ready agents.

Govern agent identities and lifecycle

Keep your agent fleet under control with lifecycle management and pre-defined guardrails.

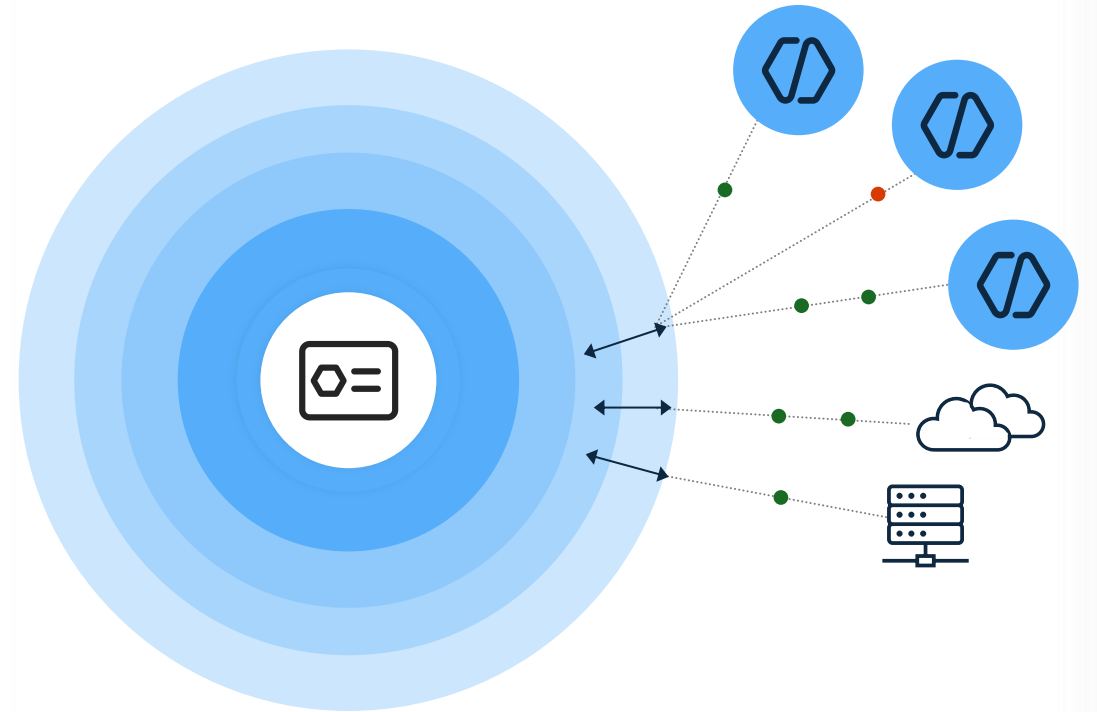

- Assign sponsors to every agent ID to keep them under human oversight.
- Manage agent lifecycle from creation to deactivation, at scale.
- Enforce least privilege with access packages.

Protect agent access to resources

Reduce risk of breaches and prevent malicious agent access to resources.

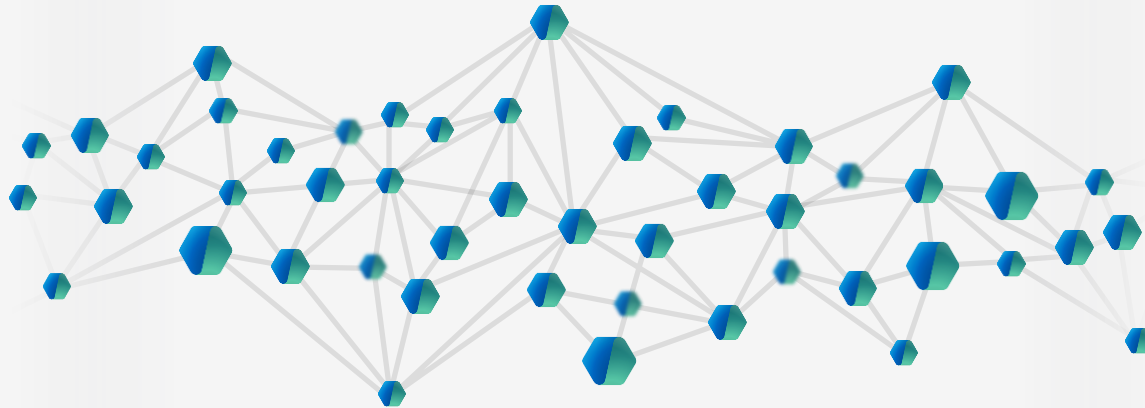

- Enforce Conditional Access policies.
- Block agents at risk from accessing resources.
- Protect agents from Internet threats.
